

Viresh Duvvuri

Seattle, WA | +1-509-964-5469 | vireshduvvuri@gmail.com | linkedin.com/in/viresh-duvvuri

Software Development Engineer specializing in AI/ML systems with 7+ years leading architecture design and implementation of production software across autonomous systems, multi-agent AI platforms, and enterprise applications. Expert in agentic AI frameworks (LangChain, LangGraph, MCP), building scalable ML solutions end-to-end, and leading cross-functional teams through full software development lifecycle with proven track record of deploying systems that improved operational efficiency by 50-80% through data-driven insights and rigorous evaluation.

Skills

Programming: Python, C++, JavaScript, TypeScript, SQL, FastAPI, Flask, React, NumPy, Pandas, OOP

AI/ML Frameworks: Agentic AI, LangChain, LangGraph, Multi-Agent Systems, MCP (Model Context Protocol), RAG, Context Engineering, Prompt Engineering, Model Evaluation, MLOps, GenAI, FAISS, Pinecone, PyTorch, TensorFlow, Scikit-learn, Feature Engineering, Human-in-the-Loop (HIL), Model Deployment, Responsible AI, Vector Search

Cloud & Infrastructure: AWS, Azure, API Design, Deployment, DevOps, Docker, Kubernetes, Monitoring, Performance Tuning, Scalability, Workflows

Data & Analytics: Data Integration, Data Processing, Data Science, Enterprise Integrations, Enterprise Systems, Knowledge Graph, Operational Efficiency

Work Experience

Grid CoOperator

Seattle, WA

AI Engineer

Mar 2025 - Present

- Led architecture design and deployment of multi-agent AI system for smart grid analytics using LangChain and MCP frameworks, collaborating cross-functionally with business stakeholders to translate operational requirements into scalable agentic AI solutions with prompt engineering strategies that reduced analyst workflows by 70% within 2 months through rapid iteration and real user feedback
- Architected AI orchestration system where specialized agents communicate and coordinate for complex analytics tasks, deployed on AWS with comprehensive observability dashboards, cost monitoring, and model evaluation pipelines tracking quality metrics, latency, and performance to achieve reliable enterprise performance within 6 weeks across 50-100 daily queries
- Designed and deployed production AI system to cloud infrastructure with CI/CD pipelines, monitoring frameworks, and performance optimization, accelerating deliverables by 60% within first quarter through rapid experimentation, iterative prompt engineering, and data-driven continuous improvement

Freefly Systems

Woodinville, WA

Senior Software Engineer

Nov 2021 - Oct 2025

- Led engineering team as technical lead for AI diagnostic system development, architecting full-stack solution with Python Flask REST APIs and React frontend serving 200+ daily queries, established code review standards and mentored junior engineers on ML model integration best practices, coordinated cross-functional releases from alpha through production with comprehensive testing protocols
- Built automated systems to process complex technical data and identify system failures, developing knowledge base enhancements and support tools that streamlined operations
- Contributed to drone platform codebases implementing new features and optimizations for flight control systems and payload integration across multiple product lines, managed software integration projects from planning through release
- Led release management for drone platforms overseeing testing phases from alpha through production deployment, coordinating firmware updates and executing comprehensive testing protocols with cross-functional teams

Lumenier

Sarasota, FL

Drone Software Developer

Jul 2020 - Oct 2021

- Wrote embedded code in C++ to integrate LiDAR and optical flow sensors for obstacle avoidance and position holding with/without GPS under various lighting conditions
- Collaborated with open-source flight control software maintainers for integration, testing, and deployment of autonomous flight algorithms, prototyped innovative features like toss-to-launch for product roadmap development

York Exponential

York, PA

Software Engineer - R&D

Aug 2018 - May 2020

- Developed prototype software for in-house autonomous surveillance mobile robots using ROS2, SLAM, and computer vision technologies
- Built Human Machine Interface for Universal Robot welding applications using Python and Kivy framework, implemented multi-robot control systems with platform independence

Education

Washington State University

Master of Science Computer Science

Pullman, WA

Jan 2015 - Jan 2017

GITAM University

Bachelor of Technology Information Technology

Visakhapatnam, India

Jan 2011 - Jan 2015

Projects

GridCOP: Smart Grid Analytics Agent

- Problem: Power grid analysts needed automated database querying and intelligent insights to understand complex data patterns beyond basic visualizations
- Solution: Developed A2A multi-agent system using LangChain orchestration and MCP where specialized agents coordinate tasks through prompt engineering strategies, implemented RAG and vector search (FAISS) for intelligent querying, implemented model evaluation frameworks to monitor quality and cost metrics, deployed on AWS with observability and logging
- Impact: Enhanced analyst productivity by 70% through AI co-pilot that augments domain experts with automated workflows, implemented human-in-the-loop (HIL) evaluation and testing pipelines for production-ready AI systems with robust error handling through rapid iteration

Production System Optimization Tool

- Problem: Manual system analysis taking hours of expert time, creating bottlenecks in product development and customer support resolution
- Solution: Built full-stack application with React frontend, Python Flask backend, integrated foundation model APIs (Ollama and Llama 3.2) for real-time log processing and interactive analysis using prompt engineering and model evaluation
- Impact: Transformed expert analysis from hours to minutes, deployed to production serving 200+ daily queries with significant performance improvements through rapid iteration and continuous optimization

AI Travel Planner Agent

- Problem: Manual travel planning requiring hours of research across multiple sources with inconsistent and outdated information
- Solution: Built AI agent using Claude 3.5 Sonnet, LangChain, Streamlit, and DuckDuckGo Search API for personalized itinerary generation using prompt engineering techniques
- Impact: Demonstrated end-to-end AI application development, learned conversational AI patterns and real-time data integration techniques through iterative development
